Introduction

SkillLens AI is a personal AI-powered career coach designed to act as a strict, industry-standard resume auditor for IT roles and campus placements. When a user uploads their resume PDF and a specific Job Description, our system extracts the text and runs it through an advanced grading algorithm powered by Large Language Models like Google Gemini and Groq. The AI deeply analyzes the resume for quantifiable business impacts, strong action verbs, and absolute keyword alignment with the target role. It then generates a mathematical ATS score alongside actionable "Quick Fixes," telling the candidate exactly what to change to boost their score above the 80+ "Interview Ready" threshold. Built on a modern tech stack with a React frontend and Node.js/Express backend, JobStory AI securely stores analysis history in MongoDB, allowing users to track their progress and continuously optimize their applications over time.

Problem Statement

- **The "Black Hole" of Job Applications:-** In today's highly competitive job market, candidates often spend hours tailoring and submitting dozens of applications, only to be met with automated rejection emails or endless silence. The problem rarely lies in a candidate's actual skills or potential; instead, it stems from the software designed to filter them out: **Applicant Tracking Systems (ATS)**.
- **The Communication Gap:-** Modern companies rely heavily on ATS to scan thousands of resumes globally. However, these systems are rigid. They automatically eliminate highly qualified candidates who fail to include specific keywords tailored to the exact Job Description, who use weak action verbs, or whose resume formatting cannot be parsed by the software. Candidates are left guessing what went wrong, receiving only generic resume advice online rather than data-driven, role-specific feedback.
- We built **SkillLens AI** to bridge this gap and act as a personal, strict career coach. We realized that to beat an automated system, candidates need a professional-grade, automated auditor. This project was created specifically to give job seekers an unfair advantage: by taking their resume and the exact Job Description they want, and explicitly telling them the mathematical score an ATS would give it. We wanted to provide actionable, line-by-line "Quick Fixes" so candidates can stop guessing, bypass the software filters, and actually get their resumes into the hands of a human recruiter.

System Overview

- **System Overview: SkillLens AI**

1. The Frontend (User Interface)

Tech: React.js & Tailwind CSS.

Role: Provides a clean, responsive, and easy-to-use dashboard.

Action: Users securely log in and upload their Resume (PDF) + target Job Description (JD).

2. The Backend (Data Handling)

Tech: Node.js & Express.js.

Role: Manages secure API routes and file processing.

Action: Uses multer to handle the PDF upload and pdf-parse to cleanly extract the raw text.

3. The AI Core (The Brain)

Tech: Google Gemini & Groq APIs.

Role: Acts as the strict, automated resume auditor.

Action: Analyzes the extracted text against the JD, generating a mathematical score, finding weak buzzwords, and creating actionable "Quick Fixes."

4. The Database (Storage)

Tech: MongoDB & Mongoose.

Role: Securely stores user profiles and historical data.

Action: Saves all past AI evaluations so users can track their score improvements over time.

Key Features

❖ Key Features of SkillLens AI

- **Targeted Resume Auditing:** Analyzes your resume specifically against the actual Job Description (JD) you are applying for.
- **Advanced AI Analysis:** Powered by advanced models (Gemini & Groq) to perform a professional-grade, strict review.
- **Mathematical ATS Scoring:** Calculates an honest, objective score representing how an automated system will view your application.
- **Actionable "Quick Fixes":** Highlights exact lines to rewrite to boost your score above an 80+ "Interview Ready" threshold.
- **Deep Keyword & Metric Hunting:** Actively flags weak buzzwords, grammatical slips, and demands quantifiable business metrics.
- **Secure PDF Extraction:** Seamlessly handles multi-page PDF uploads while preserving vital text structure.
- **Historical Progress Tracking:** Securely saves past evaluations to a dashboard so users can track their resume improvements over time.

User Registration System

1. Secure Authentication Flow

Robust login and registration managed via **JSON Web Tokens (JWT)**.

Passwords are encrypted and safely stored using **bcryptjs**.

2. Dual Login Options

Standard Identity: Traditional Email & Password registration.

Quick Access: Seamless 1-click **Google OAuth** integration for faster onboarding.

3. Protected Routing

Private dashboards and user histories are completely locked behind authenticated sessions.

API endpoints instantly reject requests from non-authenticated users.

4. Persistent User Profiles

A dedicated `/user` endpoint automatically fetches the authenticated profile on login.

Connects securely to **MongoDB**, ensuring user data and historic resume scores remain intact across sessions.

Make Your Resume ATS-Ready in seconds!

Get instant, AI-powered feedback to optimize your resume for ATS systems and impress recruiters.

🔍 Target Role (e.g. SDE)

📄 Paste JD (Opt.)

📁 Upload Resume

🔗 Software Developer

📄 Backend Dev

📄 Fullstack Dev

ANALYZE RESUME 🚀

See the steps ↓

How It Works

1. Upload Resume

Upload your resume file (PDF/DOCX).

2. Add Job Description

Paste the job description (optional, boosts accuracy).

3. Select Target Role

Choose the IT role you want to target.

4. Get AI Analysis

See your ATS Audit Score and JD Match Score.

5. Ace Interviews

Use AI feedback to improve and succeed!

❖ **Project Workflow / Planning Steps in SkillLens AI**

1. Targeted JD Integration

Each created event contains a specific Job Description (JD).

Students can apply directly to the event, forcing the AI to score their resume against that exact role.

2. Application Sorting & Filtering

Admins get a unified dashboard of all applicants for an event.

Automatically ranks candidates based on their AI-generated ATS score, saving recruiters hours of manual filtering.

3. Automated Updates

Automatically notifies students of application deadlines, event updates, or if their resume score currently falls below the required threshold for the event.

Conclusion

Solving the ATS Problem: SkillLens AI effectively eliminates the "black hole" of job applications by bridging the gap between a candidate's skills and automated recruitment software.

Data-Driven Feedback: By shifting from generic resume advice to mathematical, JD-specific scoring, users gain a distinct, unfair advantage in a competitive job market.

Empowering the Candidate: The platform empowers job seekers through actionable "Quick Fixes," ensuring they understand exactly what to change to secure interviews.

The Final Outcome: SkillLens AI transforms the application process—candidates can stop guessing if their resume is good enough, and start focusing on interview preparation.

THANK YOU
